Spiegler Brake Rotors

Spiegler Rotors - direct from Germany where high speeds on the autobahn and race track require brake rotors to perform at their highest level.

Outer ring design

- High quality stainless steel - for better performance and durability
- Creates more air flow through disc - for better heat dissipation
- Reduces weight - for better handling
- Cleans pad surface - for high friction

Full and semi-floating design

- Reduces heat transfer to carrier and wheel
- Full float design allows for complete movement of outer ring
- Full float design recommended for racing and track days
- Allows outer ring to expand with high heat - eliminates warping of rotor

Carrier made of anodized billet aluminum

- Very light - for better handling
- High strength - for durability
- Black anodized color - great look

Floating Front Rotors

Solid Rear Rotors

BMW Rotor Conversions

Parts

SPIEGLER BRAKE ROTORS

Spiegler Brake Rotors / Stainless Steel, Front and Rear

Inner aluminum ring is black anodized, other colors on request for an additional charge

All rotors come semi-floating; for track days or racing they should be converted to full floating!

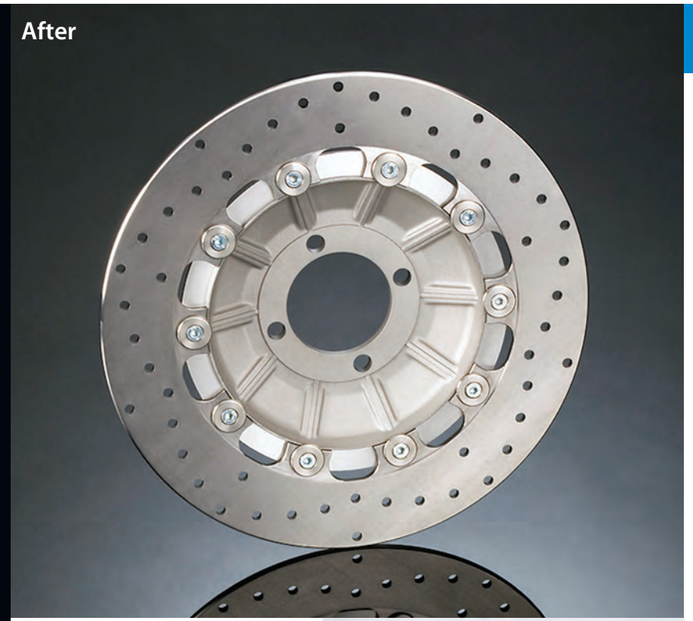
BA = Used for replacement brake rotor (New Carrier, new outer rotor)

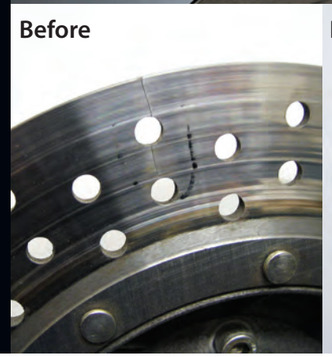
BU = Used for replacement outer rotor (New outer rotor, used carrier)

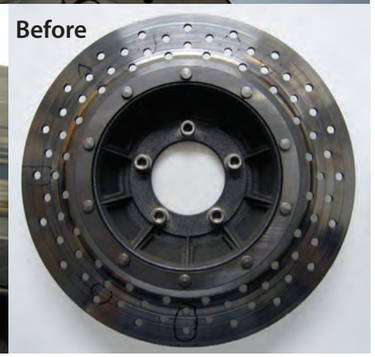
!! Floater has to be installed with new benzing clips !!!

BMW Rotor Conversions - Conversion made ONLY at Spiegler Performance Parts

Stainless steel rotor is assembled on the OEM carrier







Spiegler Performance
Specialists in BMW rotor conversions

Spiegler replacement OEM rotors offer superior performance over original equipment.

Simply send us the complete brake rotor with carrier and we will transform it into a high performance product.

All conversions are done exclusively in-house.

Step 1
We will remove the old outer rotor, measure the carrier and inspect it for cracks and corrosion. If the carrier is worn or defective we will advise accordingly.

Step 2
If the carrier passes inspection, it will be surface treated. After surface treatment the carrier will be machined.

Step 3
The new stainless steel rotor will be assembled to our exact specifications. The stainless steel floaters allow for a semi-floating assembly and therefore excludes any warpage.

Step 4
Quality control; after final assembly all brake rotors are measured to ensure they are within specifications.

To ensure proper performance **new brake pads should be ordered.**

Prices include all parts and labor, Brake pads must be ordered seperately							Brake Pads
